

CoverCap® Pole Covers

Protection from Moisture & Decay

CoverCap pole covers are designed to protect pole tops from decay and the effects of weathering. Manufactured from low-density polyethylene with UV inhibitors, they provide an inexpensive, durable, clean, and easy-to-use solution for combatting pole top decay. They are ideal for use on any sound pole top including cut surfaces, reset poles, and all new installations. The CoverCap will provide decades of protection to pole tops.

Design & Installation

CoverCap pole covers are circular and include an overlap and four one-inch tabs. Two circular ridges on the underside of the cap supply additional strength and allow for ventilation. CoverCap pole covers are applied to new poles prior to setting or to poles already in service.

To apply CoverCap pole covers, the installer will need four two-inch aluminum or galvanized nails (not included). Drive one nail through each of the four "tabs" on the CoverCap to secure it to the top of the pole.

For additional protection, or to arrest decay on in-service poles, apply a liquid preservative like Hollow Heart CB to the pole top prior to installation of a CoverCap. Hollow Heart CB is available in one-pint squeeze bottles for easy application and is a general-use preservative containing co-biocides of copper and boron.

Ordering Information

CoverCap pole covers are available in five sizes and are packaged 10 per carton.

Size (inches)	Pole Class
6.5"	5, 6
7.5"	4, 5
8.5"	3, 4
9.5"	2, 3
10.5"	1, 2
