

30. SUSTAINABLE PROCUREMENT (CSR) POLICY

MP Power Ltd is committed to integrating sustainability into our procurement processes.

We recognise that responsible sourcing not only supports environmental protection but also contributes to social and economic well-being within our supply chain.

All procurement activities will be carried out in a manner that seeks to minimise negative environmental impacts and promote positive social outcomes.

We will:

- Prioritise suppliers who demonstrate a commitment to sustainable practices, including reducing waste, conserving resources, and lowering carbon emissions.
- Assess the lifecycle impacts of products and services, favouring options that are ethically sourced, recyclable, or made from renewable materials.
- Engage with suppliers to encourage continuous improvement in their sustainability performance and provide support where possible.
- Ensure transparency by communicating our sustainability expectations to all suppliers and monitoring compliance through regular reviews.
- Strive to make balanced decisions that consider cost, quality, environmental impact, and social value.

This policy will be reviewed annually to ensure it remains relevant and effective in promoting sustainable procurement throughout our operations.
